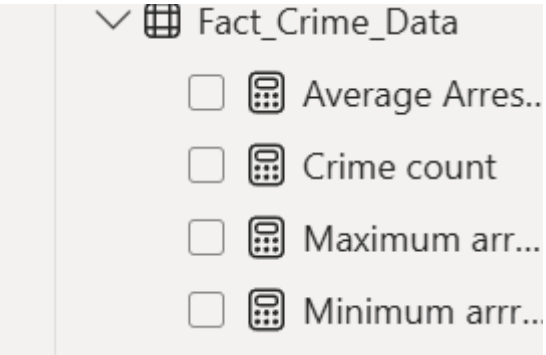
TASK 4 – BASIC DAX MEASURES

- Create aggregation measures such as:
  - **SUM** → total of a numeric column
  - **AVERAGE** → mean value of a numeric column
  - **COUNT / COUNTROWS** → number of records
  - **MIN / MAX** → smallest and largest values

✅ *Task*: Use these measures in simple visuals (Cards, Tables, Charts).

Step1: Dax measures creation



Basic DAX measures such as **SUM, AVERAGE, COUNTROWS, MIN, and MAX** were created in the Fact table to perform aggregations on numerical columns.

Step2: Cards Visualisation

Basic DAX measures such as **SUM, AVERAGE, COUNTROWS, MIN, and MAX** were created to aggregate numerical columns from the Fact table. These measures were used in **Card visuals, a Clustered Column Chart, and a Table visual** to summarize and compare crime statistics across different crime categories.
